

Oil Creek State Park Trail
Report for the April 28, 2015 EPTA Meeting

Much trail maintenance is and will be occurring. Currently, we are busy keeping the trail clear and clean, and soon will begin cleaning out the ditches along the entire trail. The drainage is poor, and the culverts need cleaned and a few replaced. There should be a larger culvert project for this year, the start date is not known at this time, but it will involve the closure of portions of the trail if not the entire trail. Miller Farm and Shaffer Farm culverts are going to be contracted out and replaced. Once Park Management has a notification of a start date, they will begin to notify the public of any closures.

There are a few 5 and 10k runs planned this year that will use portions of the bike trail.

A bike “fix-it” station will be installed at the parking lot by the park office. It should be installed by Memorial Day if not before.
