

## Web Master Report

**Trails along the Spine:** <https://eriepittsburghtrail.org/mainline-trails/> I recently made a change of the source information for this page. If you have a moment, please check:

- A) The link for your trail goes to the page that you want. If you wish something different, please e-mail me the link, or use the feedback page accessible from the lower right corner.
- B) The mileage numbers are approximately right. Note that these mileages cover only the portion of a trail that is on the Eire to Pittsburgh Trail. You can see the route used by going to the map verification page at <https://pgherie.com/mapping/> and selecting your trail.

**Website Administration:** As EPTA secretary Kim has been granted administrative access to all sections of the website. This includes the Domain Name server (DNS), the name Servers (NS), The website registration (Directnic.com) and WordPress Super administrator.

**Making the website more visual as opposed to textual.** Kim and Courtney have been working on a revision to the web site that is more visual. It is being developed in using the Wix server/interface. It can be viewed <https://info688879.wixsite.com/eriepittsburghtrail>

**Google interactive map:** <https://eriepittsburghtrail.org/freewheelingeasy-google-map/> I recently made major updates to the information on the amenity pages that are available from this map. The data is primarily sourced from Google Map data, with checks on TripAdvisor and Facebook. If you have a moment, please check the amenity pages associated with your trail:

- A) For those items labeled “Unverified” provide additional conformation that they exist or are miss classified. Use the edit icon to update/add information. I will then update the map and attempt to update the Google Map data as well.
- B) For those items with an older date, use the edit icon to supply a new date and how that date was derived.

This interactive map could be placed on your trail website, if you agree to update/maintain the data at least twice a year
